

**For Use On: Caterpillar®  
3508B / 3516B & 3512B**

**Premium Viton® Aftercooler Seals**

**Part Numbers: 1073758  
1073759**

*High Quality  
USA Manufactured  
Aftercooler Seals From  
Magnum Diesel Parts*

Magnum Diesel Parts, is pleased to announce the availability of two new Aftercooler seals used on the Caterpillar 3508 B, 3512 B, and 3516 B series engines and are provided in every custom "EZ" Style Overhaul gasket set and "OEM" style Aftercooler gasket set.

Our molded seals are manufactured using DuPont Viton® and are produced here in Southern California to meet strict specifications set by Magnum Diesel Parts.

Engineered for Reliability and Extended Performance our seals are molded using advanced technology and process equipment. MDP's Aftercooler seals are designed and engineered to provide long term service in demanding "Big Bore" applications.

Due to the service requirements of the 3500 engines only a properly compounded Viton® designed for the temperature and duty cycle of the engine should be used. Many offshore compounds contain fillers and cheaper process aids to simplify the molding process which if used improperly can undermine the original desired physical properties of the material. Our experience in processing and material composition ensures that our products perform to the highest level.

Magnum's precision molding processes and use of high quality domestic produced elastomeric compounds in components such as; Aftercooler Seals, Valve Cover seals, Flange and Cover seals is critical to the overall quality and customer satisfaction of our gasket kits.

Magnum Diesel Parts has led the industry in being the first quality producer of these components for aftermarket service on these and other critical applications.
